

Clip 10

[Renee]

I'm going to talk about the mag water. Would bathing in magnetic water help? If you set magnets up in the tub, would that make some kind of difference? like because water absorbs through the skin?

[Peter]

Well, now you're giving, now I'm going to get into a secret that I've really not told too many people.

[Renee]

Oh, okay, good.

[Peter]

You know, you can take the **water jar energizer**, and we do it over here, put it on the spigot for the, you know for your bath and I must say, I'll tell you what it's phenomenal. The feeling of the water is just incredible. Of course, it's a very silky feeling, and it's very calming, and I've got to tell you, it just, it's got its own particular makeup and feeling to it. I don't think you can, well, I've been trying to evaluate it.

Now, of course, I know what it does is **it provides all the negative energy**, which is very good. I think that it may help, I'm not positive this thing, but I've been working on this, trying to analyze it correctly. I think **it may increase the oxygen transfer in the body**. I think it **gives a whole tremendous feed of oxygen**, because other people I've talked to, we all come to the same understanding, the same feeling that it just, you feel so clear afterwards. So, yeah, I could say just give it a try.

[David]

It's got to be a lot better than chlorine.

[Peter]

Well, you know, one of the things about, I'll tell you what, one of the things about magnetizing the water is that it locks the chlorine, it locks it into the water molecule.

[Peter]

As a matter of fact, I'll tell you what, what we call it in physics, degasification. And we've had a lot of people, for years, explain, you know, if they've had a chlorine situation, that there's a certain caustic reaction to chlorine, you know, you can't stay in it all that long. And that goes away. What you have is a very soft, silky water. So, yeah.
